DETAILED ACTION

Election/Restrictions

Claims 10, 14, 21-50 and 53-55 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 07/08/2004. Examiner agrees that claim 8 is generic.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8, 9, 12, 13, 51 and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mitoguchi et al. [US 6,593,841] in view of Takahashi et al. [US 4,322,698].

Mitoguchi et al. discloses a planar transformer comprising :

- a plurality of fine, continuous conductive patterns having a thickness of 10µm or more and a width to thickness ratio from 1 to less than 5 [column 32, lines 14-21]; and
- a plurality of magnetic insulative layers and at least one conductive pattern formed therebetween.

Mitoguchi et al. discloses the instant claimed invention except for the specific arrangement of the magnetic insulation layers and the conductive patterns.

Art Unit: 2832

Takahashi et al. discloses an inductor device [figure 34] comprising a plurality of conductive patterns [122, 124], each disposed between two magnetic insulation layers [121, 123, 125], wherein the magnetic insulation layer is in contact with the conductive pattern and the magnetic insulation layers contact one another in the area not in contact with the conductive pattern.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the magnetic insulation layers and conductive patterns arrangement of Takahashi et al. in Mitoguchi et al. for the purpose of reducing the thickness of the device.

Response to Arguments

Applicant's arguments with respect to claims 8, 9, 12, 13, 51 and 52 have been considered but are moot in view of the new ground(s) of rejection.
